Rod,

- As a temporary fix - you can adjust the colors as follows: select "SAVE" - then BREAK

1) PixelPrint Plus - ~~CO~~ INK - POKE 39028
PAPER - POKE 39030
BORDER - POKE 39032

— RUN 9999 — saves it.
— RUN 9200 — start over with POKES.

2) Create a doc — mod. line 9000

SAVE BASIC @ "C_DOC.BAS", 9000

3) Print a doc — mod. line 310

SAVE BASIC @ "P_DOC.BAS", 9000

4) Customize — no colors used.

— I'll fix the production version to work from "BOOT-MENU" program!

(this won't fix everything.... some are in the M/C; I'll re-write it) Hon

over →

"Print-a-doc" & 'Create-a-doc' will probably still give 'blue' borders ... with "diction" calls, in the machine code, I'll fix the production version!"
